Introduction

This is the extended **DateTimePicker** component with new design and functionalities as you can see from screenshots.

Background

Control has one new property **HeaderColor**. Other properties remain same.

Using the code

AdvancedDateTimePicker is a class that inherits **DateTimePicker**. Control contains button which covers standard **ShowDown** button to show popup form with calendar. For this purpose I used **PopupWindowHelperClass** which can be found here http://www.vbaccelerator.com/home/NET/Code/Controls/Popup_Windows/Popup_Windows/article.asp.

On the form I used **DataGridView** to manipulate by **DateTime** value.

To change year and month popup window uses **ComboBoxes** and **Buttons**, to change hours and minutes uses **Trackbars**.

Project is simple, so there is not much to say about it. Please see demo project for details.
